

e p s i l o n

The Epsilon Scythe's specs illustrate what it does (0 to 60 in about 4 seconds) — as well as what it doesn't (zero emissions, zero motor oil). With one moving part in the motor, no clutch, and two gears, it's not only a joy to drive, but to own as well. There is no motor oil to change; no filters, belts, or spark plugs to replace; no oxygen sensors to mistrust before an emissions test — in fact, no emissions test required ever. Other than inspection, the only service we recommend for the first 100,000 miles is brake and tire service. 🍷
